

PRODUCT DATA SHEET

POWDER NBR NP-3183

PRODUCT DESCRIPTION:

- NP-3183** is processed through special technics after butadiene and acrylonitrile are copolymerized under low temperature.
- NP-3183** is powder form macromolecule rubber.
- NP-3183** is environmental friendly material. It has passed various measures for SGS Test and does not contain 16P.

PRODUCT CHARACTERISTICS:

- A. Controls plasticizer from precipitation** – can absorb low molecular plasticizers after addition, thereby to reduce or avoid low molecular plasticizers from precipitation
- B. Environmental friendly** — will not cause environmental pollution
- C. Not harmful to human body** – NP-3183 is suitable to use in food and human body contact PVC products industries.

PROPERTIES OF APPLICATIONS:

NP-3183 can provide the following properties to PVC products:

- Heat and low temperature resistance properties
- Oil resistance property
- Increases elongation at break
- Improves compressive deformation properties
- Improves product's rebound resilience
- Low temperature flexibility

APPLICATIONS:

NP-3183 can be used in thermoplastic elastomer materials to fully or partially replace of liquid plasticizer.

• PVC Cables and Wires	• Friction materials etc.
• Auto-mobile & construction use sealant, refrigerator sealant	• Plumbing pipe gasket seal
• Auto-mobile fuel pipe, hosepipe	• Auto mobile dust cover, Mine-use protective cover
• Rubber Conveyer belt, V-belt	• Thin film, leatheroid, banner
• Shoe products (Galoshes and Safety boots)

TECHNICAL DATA:

Polymer Name	NP-3183
Method of polymerization	Low temperature polymerization
Acrylonitrile content (%)	33
Mooney Viscosity ML1+4 @100°C	38
Parting agent	Chemicals
Particle size (mesh)	40
Degree of crosslinking	Linear
Specific Gravity	0.98
Stabilizer	Non-pollution
Emulsifier	Aliphatic acid
Appearance	Powder form
Packaging	25KG
Application and Properties	PVC products

NOTE:

Succeed Life Science shall be not liable under any circumstances for misuse of the information of this manual. The data printed herein is correct , however it has been obtained from laboratory work. Preliminary tests must be made with the product in order to set process variables..
